Sites A, B, & C

Prime Aeronautical, Commercial and Industrial Development Opportunity

Mather Airport (MHR), located in Northern California's logistics corridor just 20 minutes from downtown Sacramento, offers a prime opportunity for development with direct access to regional, national, and global markets. Purpose-built for cargo and general aviation, the airport features an 11,300-foot runway, FAA tower, and strong aviation infrastructure supported by a diverse on-airport business ecosystem.

With available land, modern amenities, and a proven operational foundation, Mather provides a compelling platform for high-impact aviation and non-aeronautical development, including commercial and light industrial.

Northside Airport Development (Sites A, B, & C)

The Northside Area of Mather Airport presents a strategically positioned development platform, combining strong land-side access, existing infrastructure, visibility, and flexible land use designations to support a range of mixed-use, commercial, and aviation-supportive projects. Together, these sites offer developers a rare opportunity to deliver integrated, phased development that bridges public-facing commercial activity with expanding airside and industrial operations, capitalizing on both scale and connectivity.
